

How Aras Clinched Its Scalability with ReadyAPI

RESULTS

Scalable

Successfully conducted large volumes of API performance and scalability testing.

Powerful

Achieved the desired system performance for 10,000 concurrent users without slowdowns.

Integrated

Enhanced collaboration between teams with integrated testing and development tools.

If it weren't for the ReadyAPI support team, my project would have been a year behind. With their support, I was able to finish about three months ahead of schedule.

—Bill Turner, VP of Quality and Support for Aras Corporation

Overview

Aras, the creator of a lifecycle management software used by global manufacturers, sought to ensure their system's scalability for massive simultaneous use. ReadyAPI was chosen for its flexibility, ease of use, and the ability to fit into Aras's existing workflow, significantly contributing to the company's scalability goals.

Approach

- **Needed** a tool that could handle extensive API performance and scalability testing
- **Leveraged** SmartBear's helpful customer support team during the evaluation phase
- **Required** a cost-effective, ease of integration with current infrastructure
- **Emphasized** selecting a stable company with a proven track record

Benefits

Aras leveraged SmartBear's ReadyAPI to effectively scale their enterprise application, streamlining the process and ensuring a focus on customer satisfaction rather than operational stress. Ultimately, the success of ReadyAPI can be seen in how much time and effort it saves for Aras. "If it was not for ReadyAPI, I would have had to add over four people to the team," Bill says. "With ReadyAPI, I was able to conduct my project in 12 months using just two people."
